Gold King Mine Hearing prep Tough QA House Science for 9 09 15(jcard).docx

Randy, David: I've attached some of my thoughts. Please review. OPA should have answers for the questions I've added at the end. Also, I hope someone took notes from the prep session yesterday. Tom Reynolds asked several good questions.

Also, it's important to print all the documents on the web site, so Mathy can again review each one prior to testimony.

Finally, this is the Scope of Work from the Action/Work Plan for GKM. It's important that we are consistent in describing it and Mathy should be intimate with this description:

"The project work includes improving site access, grading the top of the dump as a work area, directing mine discharge to the pond at Red and Bonita work site, establishing a water treatment system, removing material covering the adit, installing a new portal structure and rehabilitating the adit as directed by the OSC. Upon completion of activities the site will be stabilized with the discharge solely directed to its original drainage."

Thanks. Joan

Hi Joan, Hi David. I am sending the current Q and A. One attachment is a compilation of the posted QFRs (many unfortunately quite dated), the QAs related to the claims process, and the transcribed QA from the press call with Stan and Mathy. The other attachment titled Tough QA has many more Qs than As. R-8 help on that is very much appreciated. Feel free to add to the Tough Qs and As. Getting back to me with something by 6:00 pm tomorrow/Friday (9/4/15) my time would be terrific, but I understand if it spills into Tuesday. But our next prep session with Mathy is Tuesday at 10:30 AM our time, so COB Friday would work much better so that I could get them to Mathy and he would have the weekend to review the Q and A.
